SKILLS

- HTML, CSS
- Bootstrap
- Javascript
- PHP
- Laravel
- mySQL
- Photoshop, Illustrator
- Flutter
- Firebase

EDUCATION

THE BRITISH COLLEGE

BSc. Hons Computing
2019 - 2023

SHREE BAJRABARAH SEC. SCHOOL

H.S.E.B
2017 - 2019

EMERALD HIGHER SEC. SCHOOL S.E.E

► ACADEMIC PROJECTS

1. EzFresh (E-commerce Website) -

In my third year of my Bachelor's, I had an opportunity to work on a college group project with a total of five members. We were given a case study and assigned to build a responsive e-commerce website from scratch within a period of 3-4 months. The module name was Project Management so we had to use the concepts of the module like initial, planning, execution, monitoring/controlling, and closing phases.

2. Simple Website using Laravel -

A simple shopping website focused on CRUD operation was assigned to us at the start of our last year. Using Laravel, I learned about Models, Views, Controllers, ORM, Authorization, Routing, and so on.

3. WhatsApp Clone using Flutter -

For the final year project, I proposed to build a WhatsApp clone mobile application and it was accepted so using the flutter for front end and Firebase for the back-end I was able to replicate the WhatsApp application.

► EXPERIENCE

CLOUD FACTORY, NEPAL

[SEPT. 2021 - JAN. 2023]

Data Analyst

As a data analyst, I was responsible for labeling various videos and images so that machine learning models could recognize them. I have worked on a few workstreams/projects. Such as:

- In some projects, for instance, we needed to track the basketball player and label their properties such as jersey number, and jersey color, and also track the ball frame by frame.
- In other projects, we had to label all the body parts of a person.
- I have also participated in a data entry project.
